

COMPANY PROFILE

Conlan is a Danish owned company with one branch in Germany, which develops and produces security systems.

The company emerged in the early 90's as result of the collaboration with the technical department from the University of Aalborg. Since then, this partnership has been extended towards research department, international business department, and usability department.

We build our future in security business on continuous innovation and development in partnership with our customers. Their special demands drive us to developing new products as well as OEM (Original Equipment Manufacturer) solutions for access control.

Meeting the highest quality requirements and overcoming the most insidious threats that our customers face are the main aims of our business.

The concept embedded in all our products is that of double security system. Their features come in pairs accomplishing every one of your security-related needs: they are user-friendly and of high quality, water and vandal proof, support both outdoor and indoor use, stand-alone and network programming, having been sealed and secured under the highest Danish security standards.

The devices most often employed - Keypads, Proximity Readers and Fingerprint Readers are at the core of stand-alone, Conlan integrated access control systems, as well as of OEM solutions.

A 100 % full scale test is done on each unit before leaving the company.

Currently, Conlan covers more than 60% of the Danish market and cooperates with Germany and East European countries, China and other countries.
